linkedin.com/in/anton-kuznietsov-965b0aa8

github.com/Kuantor

SKILLS

Languages

Python, JavaScript, TypeScript, C/C++, SQL, HTML, CSS

Backend

Flask, Django, FastAPI, Node.js, REST API, OAuth 2, Jinja, WebSockets

Frontend

React, Next.js, jQuery

Databases

MySQL, PostgreSQL, Redis

AI / LLM

LLM integration (Claude API), TF-IDF RAG, prompt engineering

Cloud & DevOps

AWS, Docker, Linux, Git/GitHub, GitHub Actions (CI/CD), nginx/WSGI, PythonAnywhere

Testing

pytest, test automation (6+ years), manual testing

CERTIFICATES

Goethe-Zertifikat B1 (German)

LANGUAGES

English — fluent

German — B1 (Goethe-Zertifikat)

Ukrainian, Russian — native

EDUCATION

1996–2003

Kharkiv Physics-Mathematics Lyceum No. 27, Gold Medal

2003–2008

Kharkiv Karazin National University, Master of Science in Mathematics, Diploma with Honours, Chair of Mathematical Physics and Computational Mathematics

2008–2011

Kharkiv Karazin National University, Postgraduate studies, Theoretical and Applied Mechanics

ACHIEVEMENTS

- 1st place, All-Ukrainian Olympiad in Theoretical Mechanics (2007);
- 2nd place, All-Ukrainian Olympiad in Informatics (2007)
- Author and co-author of 14 papers in scientific journals and conference proceedings

Anton Kuznietsov

FULL-STACK PYTHON DEVELOPER

PROFILE

Software engineer with 10+ years across development and test automation — C++ game and firmware development, then six years of Python-driven QA automation for enterprise storage — aiming for a Full-Stack Python Developer position. Master of Science in Mathematics.

EXPERIENCE

Full-Stack Python Development — Independent Study & Projects

Self-directed · Kyiv · **Mar 2026 — present**

- Designed, built and deployed KuantorFlow — a full-stack language-learning platform (Flask, MySQL, REST APIs, Google OAuth 2.0) with an LLM study companion (Anthropic Claude API, TF-IDF RAG) — live on PythonAnywhere.
- Manual and Claude Code-driven engineering: full development cycle with a Kanban board and an automated regression suite.
- Ongoing coursework on Coursera (full-stack, cloud and AI development)
- Other projects: Billiards and Synthesizer browser demos (see Projects section)

Quality Control Engineer (Test Automation)

Software Aspekte · Remote · **Mar 2023 — Feb 2026**

Infopulse · Ukraine · **Mar 2019 — Mar 2023**

- Automated and manual testing of storage filesystems, network-attached storages (NFS and SMB protocols), and data-synchronization applications.
- Testing of software upgrades on storage appliances.
- Python test automation on different projects.
- L3 technical support for the storage products.

C++ Developer

Jabil · Kharkiv · **Mar 2018 — Feb 2019**

- Automated testing of the Redfish service (Python)
- BMC expertise; investigation and prototyping with OpenBMC

C++ Developer

Gameloft · Kharkiv · **Mar 2015 — Aug 2017**

- In-game logic and UI for mobile games (pawnshop, leaderboards, daily prizes)
- Location services and push notifications

Engineer

Westron · Kharkiv · **Nov 2014 — Mar 2015**

- Security systems for nuclear power plants: database maintenance and software testing

Earlier: Computer science teacher (C++ practical lessons) — Kharkiv Karazin National University (2009–2013) and Kharkiv National University of Radio Electronics, course taught in English (2008–2009). Tutor in mathematics and physics (2010–2014). Chorister (baritone) — Kharkiv Philharmonic Academic Choir (2009–2014).

PROJECTS

KuantorFlow — full-stack language-learning platform

github.com/Kuantor/kuantorflow

Flask + Jinja + MySQL with Google OAuth 2.0 sign-in, REST endpoints, per-user settings and quizzes; deployed on PythonAnywhere. Integrated AI study companion built on the Anthropic Claude API with TF-IDF RAG and tool use. Companion pytest regression suite (87 tests) and a DB backup pipeline.

Other projects:

- Built a browser billiards physics demo (vanilla JavaScript, HTML5 canvas): elastic-collision mathematics implemented from scratch, animation loop, music playback, mobile/touch support — live at kuantor.github.io/Billiards
- Built a browser subtractive synthesizer (Web Audio API): oscillator → low-pass filter → amplitude envelope in the spirit of the Yamaha CS-5 and Moog Prodigy, playable from the computer keyboard, with a step sequencer — live at kuantor.github.io/Synthesizer
